

SECURITY INNOVATION LAB (SILab) THE NETHERLANDS

Architect	KINGMA ROORDA Architects
Project	SILab - Delft, The Netherlands
Featured Collection	TOPAZ Rolls
Year	2008

In the Security Innovation Lab in Delft, answers are sought to complex problems relating to public order and safety, using information technology, simulation and visualization.

This computer-driven "pressure cooker" was shaped as a human body with the red server as the pulsating heart, the wiring is the veins where data is processed while the brain is translated in several gaming units – the core activity here is creative thinking.

The team of Kingma Roorda Architects choose to apply the earthy color tones of 2tec2's Topaz vinyl flooring to reinforce the contrast with the individual, colorful units.
